The Flora of the Eagle Creek Formation

By RALPH W. CHANEY

¶ The Eagle Creek formation is exposed along the bottom of the Columbia River gorge on the Oregon side. It is the oldest formation in the region.

¶ The monograph contains a number of drawings, tables, and nearly a hundred halftones.

WATER REPTILES OF THE PAST AND PRESENT

By SAMUEL WENDELL WILLISTON

*Late Professor of Paleontology in the
University of Chicago*

Professor Williston, who is widely known as a student of extinct reptiles and as the author of *American Permian Vertebrates*, which has now become a standard work, presents in this new volume a summary, divested as far as possible of unnecessary scientific details, of our present knowledge concerning the reptiles of the seas, lakes, and rivers of past and present times.

The numerous illustrations, in large part from the pen or brush of the author himself, include not only living types and twenty-four restorations of extinct forms, but also many figures elucidating the structures and habits of the animals.

A Source Book for the Economic Geography of North America

By CHARLES C. COLBY

Assistant Professor of Geography, the University of Chicago

The fundamental idea of the book is to make available to the busy teacher the material on this subject which is scattered widely through literature. The course which has been given for a number of years at the University of Chicago has resulted in the collection and organization of the material most suitable for the purpose.

The book contains short magazine articles and materials from Canadian, Mexican, and United States government publications. The selection of the material has been governed by the concept that there is a direct relation between the environment and the economic activities of the region. The author aims to survey the different sections of the country from the viewpoint of industrial opportunity. It is thought that this collection of materials will make possible the development of courses in this important subject.
